Dear sir,

My name is Sylvain DUTRIEUX, I'm in my second year of University in Perpignan, France. I'm studying environmental assessment methods.

In the frame of my studies, I have to make a ten-week experience work (Between April and the end of June 2011) in a laboratory or a specialized company. During this work, I will have to get samples or make observations and measures, and then interpretations to make a report.

As I have always been passionate by the marine environment (I am a scuba diver since ten years, Level II and I am building a Remotely Operated Vehicle -ROV- to take films of underwater fauna and flora), I really would like to make this work in a laboratory specialized in the marine environment. It would be a great opportunity for me to improve my knowledge about marine environment and to learn a lot about using oceanographic tools. Moreover, I could help you during sampling and analyzes thanks to what I have learned during my two years of University.

Making this work in your laboratory, seems to me a good opportunity to reach my personal objectives and, especially, as I would like to improve my English working in an English speaking environment.

I would be very grateful if you could propose to me such an opportunity.

I send you here attached a CV and stay at your disposal for any needed information.

Thank you and best regards,

Sylvain DUTRIEUX
